Know the Score— Message from the Executive Director

If you take just one message away from the information in this Scorecard it should be:

Elections matter!

The 1994 election sent solid anti-environment majorities to both Oregon's House and Senate for the first time in the 22 years in which the Scorecard has been published.

In the past, the Scorecard told the story of legislative sessions that passed pro-environment legislation seeking to address Oregon's environmental problems. Nearly a quarter century of Scorecards also show various attempts to weaken environmental bills from previous sessions and to overturn laws environmentalists supported.

They cover sessions that were frustrating in how little was accomplished, but there is no question that this year stands out from all others.

This was the first year where every vote in the Scorecard was on a bill to weaken environmental standards. For the first time, the pro-environment position on every bill in the Scorecard is NO. That says a lot.

Oregon League of
Conservation Voters

The average pro-environment score this year in the House was just 37%. In the Senate it was 34%. That's a dramatic drop in pro-environment voting in the Senate, where 1993's average was 64%.

Why? Well, maybe after 25 years of success, environmentalists have become a little bit complacent. Maybe we let our efforts get too diffuse, working on too many problems.

Maybe our success over the last 25 years caused our opponents to work together to build their case to weaken pollution laws and protections for natural resources. Timber interests, mining companies, developers, chemical corporations, agribusiness companies, the plastics industry and others joined forces to rollback environmental protections.

While we let up on our political work, they organized at the grassroots, recruited allies, and spent huge sums to elect candidates who would vote to roll back environmental protections.

The anti-environment coalition got also got smarter about their message. Knowing that candidates couldn't run their campaigns on weakening environmental laws, they

camouflaged their language in themes like "streamlining government," "getting government out of our lives," "giving power back to local governments," and last but not least, "protecting private property rights."

Their political investments paid off during this legislative session. Just read through the votes and note the loopholes and favors for mining companies, pesticide companies, utilities, ranchers, plastics manufacturers, water users, developers, the timber industry and more.

It is no coincidence that together, these interests have invested nearly \$2 million dollars in Oregon campaigns in each of the last three elections.

The good news is, although some bad bills did get signed, most of their anti-environment agenda didn't get past the Governor's desk this year. The good news is that public support for environmental protections is as strong as it ever was. The good news is that people like you who take the time to read this Scorecard will know the score and, we hope you'll decide to take action to prevent another legislative session like this last one.

Here are four easy things you can do to turn things around in the Legislature:

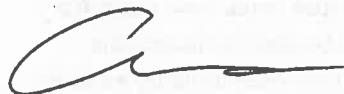

1. Take action by joining and continuing to support the Oregon League of Conservation Voters, the political arm of Oregon's environmental movement.

2. Take action by making sure your friends and neighbors "Know the Score" of their Representative and Senator. Share the Scorecard with at least five friends and neighbors.

3. Take action with your vote, by supporting pro-environment candidates at the local, state and federal level.

4. Take action by making the pledge to become just a little more political this year than you were last year.

Oregon's environment and our future depend on it.

Overview of the Session

Environmentalists were on defense. We were so busy defending environmental protections there was virtually no discussion of pro-active legislation. The anti-environment attacks came from all directions. Early in the session, OLCV was monitoring more than 200 anti-environment bills. We've included 30 of the worst in this Scorecard. The number and scope of the bills is a strong testament to how serious anti-environment legislators were about slashing environmental protections. Most of the bills fall into the following categories:

- Creating loopholes in existing laws to benefit various industries, resource users and polluters.
- Transferring the costs of protecting the environment from polluters, resource users, developers and others onto taxpayers.
- Creating new hurdles to prevent government agencies from implementing and enforcing regulations to protect the environment.
- Cutting the public out of the process by creating new barriers to citizen involvement

Despite this onslaught, there were some victories this session. Environmentalists defeated a bill that would have allowed a copper mine to be sited in the pristine watershed that provides drinking water for Salem (HB 3427). In addition, a number of bills

designed to open more farm land to residential development were defeated in committees and never reached the floor. Many of the bills we've included in the Scorecard became much more moderate over the months, as OLCV and others protested and legislators got nervous about weakening popular laws.

Many of OLCV's members made their voices heard on behalf of the environment. Nearly 1,500 OLCV members joined our Legislative Action Network and contacted their Representatives and Senators when key votes were coming to the floor. OLCV and other environmental organizations helped bring over 350 people to the Capitol for a Legislative Action Day on Earth Day.

This pressure helped give Governor Kitzhaber the support he needed to veto 13 of the 19 bills in this Scorecard that passed both the House and the Senate. The main provisions in two of the vetoed bills were later passed and signed during the special session in July. While many of the bills that were signed by the Governor were modified to a less extreme version, our environmental laws suffered setbacks during this legislative session.

Average Scores

	House	Senate
1995	37%	34%
1993	35%	64%
1991	36%	62%

The Oregon League of Conservation Voters Scorecard

This is the 12th Environmental Scorecard for the Oregon Legislature, covering legislative sessions from 1973 to 1995. The Scorecard provides objective, factual information about the voting records of the Representatives and Senators of the 1995 Oregon Legislature.

Experts from many of Oregon's environmental organizations volunteered their time to help review and identify the most

critical environmental votes of the session. We want to thank the volunteers who helped compile and review this information for their valuable input.

For additional copies or information about the Scorecard, please contact:
Oregon League of Conservation Voters,
520 SW Sixth, Suite 701 Portland, OR 97204

Mining

1. and 2. Mine Pollution

SB 791 and HB 3427 would have created a loophole to allow industries to discharge pollution into three river basins, including the North Santiam River - source of Salem's drinking water. The Department of Environmental Quality denied a permit for the Kinross Copper Corporation to build and operate a copper mine on a tributary of the North Santiam because of concern about pollution diminishing or destroying the quality of the water. After the DEQ refused to grant a permit, Kinross turned to the Legislature to weaken the water quality standards.

**SB 791 passed the Senate 16-14.
Did not come to a vote in the House.**

**HB 3427 failed in the House 28-32.
Did not come to a vote in the Senate.**

Land Use

3. More development on farmland

SB 1073 would have allowed schools to be sited outside of Urban Growth Boundaries. There already are several ways schools may be sited outside of an UGB, if there is no land available inside the UGB. Under existing law, an applicant is required to show there are no alternatives to locating the school on farmland before permission can be granted. SB 1073 was introduced because of the difficulties in siting one school inside an UGB. It is poor policy to adopt a statewide bill to address one localized issue. The bill's impact on farmland was not evaluated.

**Passed the Senate 26-4.
Failed in the House 24-33.**

4. Cutting citizens out of land-use decisions

SB 1083 would have restricted the ability of Oregon's citizens to appeal certain local land

use decisions to the state Land Use Board of Appeals (LUBA). Currently about 3 percent of local appeals are taken to LUBA, about 250 a year. This bill would make most people and groups ineligible to file appeals, regardless of the merit of the appeal. The bill also increased the filing fee for LUBA appeals by 400 percent, which would price many citizens out of the land-use appeals process.

**Passed the Senate 20-9.
Passed the House 41-19.
Vetoed by the Governor.**

5. More development on farm and forest land

The sponsors of SB 1114 said they intended to free up "less-productive" agricultural land for residential development. However, the bill was written so broadly that many productive areas would have been open to development, and whole counties would have been exempt from major portions of the statewide planning program. That means in some counties high-value farmland could have been used for golf courses, destination resorts or aggregate mining.

**Passed the Senate 20-10.
Did not come to a vote in the House.**

6. Destination Resort Siting

HB 3348 would have opened up farmland to the inappropriate siting of destination resorts. The bill was designed to fast track a development at scenic Smith Rock in Deschutes County that could not gain approval under existing law. The loophole would not only allow the Smith Rock resort to go forward, but would subvert the process of resort planning by counties around the state.

**Passed the House 31-27.
Passed the Senate 16-14.
Vetoed by the Governor.**

House and Senate Vote Descriptions

House and Senate Vote Descriptions

7. Replacing farms with houses

HB 3356 would have exempted Washington and Lane Counties from state laws designed to maintain high-value farmland. Currently, Washington and Lane Counties are number 5 and 7 in terms of agricultural sales in Oregon. Together they account for 10 percent of all of Oregon's gross farm sales. Both counties also are experiencing significant population growth, which has created strong pressure to allow more sprawling residential development.

Passed the House 32-25.

Passed the Senate 16-13.

Vetoed by the Governor.

State Agency Procedures and Rulemaking

8. Transfer of environmental programs

SB 1132 would transfer management of various programs from the Division of State Lands to the Department of Agriculture. The areas affected include grazing lands, wetlands, certain streambanks and more. Environmentalists oppose this transfer because the Department of Agriculture deals with commodities. These are state lands which have a broader public value and shouldn't be treated simply as commodities. The bill didn't transfer any staff along with the programs, so there would be no enforcement ability for the transferred programs.

Passed the Senate 21-9.

Passed the House 43-15.

Signed by the Governor.

9. Politicizing the rulemaking process

SJR 12 is a constitutional amendment that would require legislative approval of all new administrative rules drafted by state agencies. Agencies must draft a wide range and number of rules to implement legislation, covering all

kinds of things from the amount a paper mill will be charged to discharge wastes into a river to the length of a hunting season. This amendment would create a political nightmare for environmental regulations, since industries and special interests would have a new tool to block regulations they don't like. This bill will be referred to voters for approval on the November 1996 Ballot.

Passed the Senate 20-9.

Passed the House 34-23.

This bill goes directly to voters and did not require the Governor's signature.

10. Northwest Power Planning Council Appointments

The NWPPC consists of representatives from four states (Oregon, Washington, Idaho and Montana). The NWPPC is charged with restoring native fish and wildlife resources damaged by the construction and operation of the federal dams on the Columbia River as well as maintaining an efficient and available power supply. The Governor of each state is authorized to appoint two representatives to serve as his/her voice on the council.

HB 2374 at first sought to require that one of the Oregon members of the NWPPC be from east of the Cascades. Environmentalists support the current balanced system which allows the Governor to appoint the best qualified candidates and then subject those appointments to approval by the Oregon Senate. The final bill, modified after these votes, requires one member to be from the Portland metro area and the other member from anywhere else in the state.

Passed the House 35-24.

This bill had improved substantially by the time it had passed the Senate and was signed by the Governor.

Special Compensation

11. Timber Industry Loopholes

SB 160, sponsored by the timber industry, will severely limit the Board of Forestry's ability to protect public resources on private forest lands in Oregon. The bill will allow private landowners, including large corporate owners, to opt out of new regulations designed to protect fish and wildlife, streams, and water quality if the new regulations reduce the value of their timber holdings by more than 10 percent.

Passed the Senate 17-12.

Passed the House 42-17.

Vetoed by the Governor, but then a modified version was passed and signed during the July special session.

12. Special Compensation for Certain Private Landowners

SB 600 would have required taxpayers to pay private landowners and developers to obey certain environmental laws. The bill was targeted at environmental rules designed to protect wetlands, wildlife habitat and open spaces. Rather than directly attacking environmental laws that protect these public resources, anti-environment legislators simply sought to make these laws too expensive for state and local governments to enforce by requiring the public to pay private landowners to obey the law.

Passed the Senate 18-11.

Passed the House 32-26.

Vetoed by the Governor.

Water

13. Limit the pro-active management of water

SB 54 would have created new administrative hurdles that limit the ability of state agencies to act pro-actively when too

much water is being taken from streams. This bill was supported by a variety of water users, including developers, many of whom don't want the availability of water to determine where they can site future developments. Environmentalists believe the state must have the tools to regulate and prioritize water uses in areas where water is scarce.

Passed the Senate 21-5.

Passed the House 34-19.

Vetoed by the Governor.

Savage Rapids Dam

SB 1005 and 1006 would derail a 1994 decision by the Water Resources Commission which would give the Grants Pass Irrigation District (GPID) additional water rights from the Rogue River if the GPID implemented a conservation plan and solved severe fish passage programs at Savage Rapids Dam by removing the dam and replacing it with irrigation pumps.

Federal and state agencies estimate that an additional 26,700 salmon and steelhead would spawn and nearly another 90,000 fish would be available for harvest if the dam were removed. The estimated economic benefit of the additional salmon and steelhead is approximately \$5 million per year. SB 1005 and 1006 would overturn this decision which was based on three years of study and negotiation by the affected parties.

Removing the dam would be cheaper than making the improvements needed to meet current standards for the passage of salmon and steelhead. Providing irrigators with water by pumps would also be cheaper than the estimated costs of keeping the dam.

14. Savage Rapids Dam - Extra Water Permits

SB 1005 would have granted GPID extra water rights from the Rogue River without requiring them to remove the Savage Rapids Dam. This not only goes against the spirit of

House and Senate Vote Descriptions

House and Senate Vote Descriptions

the 1994 decision that awarded the water right contingent on the dam's removal, but it also sets a dangerous precedent. Water rights are more appropriately granted by non-political staff and the appointed citizen members of the Water Resources Commission than they are granted to individual applicants by an Oregon Legislature which solicits campaign contributions from these same individuals.

Passed the Senate 16-13.

Passed the House 38-19.

Vetoed by the Governor.

15. Politicizing Dam Removal

SB 1006 would have required approval by the Legislature for the removal of any reservoir or diversion dam that was recommended by state agencies or local governments. This would set a very dangerous precedent by politicizing decisions that are best made by qualified scientific staff at government agencies and by the citizen commissions like the Water Resources Commission appointed by the Governor and approved by the Senate.

Passed the Senate 16-13.

Passed the House 37-19.

A modified version of this bill was signed by the Governor.

16. Keeping the water in scenic waterways

SB 1033 will create a large loophole in the Scenic Waterways Act passed by Oregon voters in 1970. River miles protected under the Act were doubled by voters in 1988. The bill will allow ground-water pumping in and above state scenic waterways unless the state can prove that the pumping will harm the scenic flows. In most cases, this will mean the state can't prove harm to the scenic waterway until after the damage had been done. Currently, about 80 percent of the scenic waterway

segments in Oregon do not have enough water to meet the scenic flows for fish, wildlife and recreation during some part of the year.

Passed the Senate 20-10.

Passed the House 36-24.

A modified version of this bill was signed by the Governor.

17. Water Resources Commission

Current statutes use congressional districts as the basis for the appointment of Water Resources Commission members. HB 2747 changes that process and allows four of seven commission members to be from east of the Cascades, an area representing less than 15% of the population of the state. The future of water management is one of the most critical economic and environmental issues facing the state. This bill skews control of water resources much too far in the direction of consumptive water users.

Passed the House 36-12.

Passed the Senate 21-7.

Signed by the Governor.

18. Reduced Protection for Instream Water Rights

HB 2754 would have changed the Instream Water Rights Act of 1987, which protects water flows needed for public uses such as fish, wildlife, pollution abatement, recreation or navigation. HB 2754 would have limited protected flows to the "minimum seasonal quantity of water necessary to support public uses." This could be a problem for both fish and pollution abatement, since more water is sometimes needed in specific months than may be needed in "minimum seasonal quantity" estimates. The bill also would have limited the protection of stream flows for recreation to the amount required for fish and wildlife. This restriction ignores the fact that flows required

for recreation may be greater than those required for fish and wildlife.

Passed the House 38-19.

Passed the Senate 18-10.

Vetoed by the Governor.

19. Ground water

HB 2889 limits the Water Resources Department (WRD) and the Water Resources Commission's (WRC) ability to restrict ground water use. It limits the ability of the WRD and the WRC to identify concerns about ground water uses related to the impacts of other water uses.

Passed the House 32-22.

Passed the Senate 19-11.

Signed by the Governor.

20. Ground Water

HB 3091 would have required ground water to be regulated separately from surface water. It would have required the Water Resources Commission to ignore the impacts of ground water pumping on surface water flows and quality when granting permits. This would have long-term implications including drying up surface waters, over mining aquifers, and legal battles between surface and ground water rights holders. Hydrologists consider the connection between surface and ground waters to be a given — this bill tried to legislate a separation.

Passed the Senate 20-9.

Passed the House 32-22.

Vetoed by the Governor.

21. Changes in Oregon's Water Policy

HB 3100 would have repealed the statewide policy on water allocation and made it illegal to transfer existing agricultural water rights to any other use. The prohibition against the

transfer of water rights would stop some new efforts to lease agricultural water and then to leave it in streams for fish and wildlife. It would also have prohibited the transfer of water rights from agricultural uses to uses such as drinking water. The bill also would have required permits to be issued for water uses even when water is only available 50 percent of the time. Currently water permits are issued if the water is available at least 80 percent of the time.

Passed the House 31-28.

Did not come to a vote in the Senate.

Energy

22. Energy Facility Siting Council

The original SB 951 would have eliminated the need for power standard which prohibits approval of new energy facilities in Oregon unless there is a "need" for the additional energy. It also would have limited opportunities for citizen appeals of siting decisions and eliminated the requirement that the Energy Facility Siting Council would have to consider the state global warming strategy when approving new facilities.

Passed the Senate 26-4.

Passed the House 46-11.

A modified version of this bill was signed by the Governor.

Pollution and Toxics

23. Prohibits Local Regulation of Pesticides

HB 2612 would have taken away the rights of local communities to set stronger restrictions on pesticide uses than the state. Pesticides can be dangerous to public health and the environment. Local governments need to retain the right to pass ordinances to protect local

House and Senate Vote Descriptions

House and Senate Vote Descriptions

health and the environment, including drinking water supplies, fisheries resources, etc.

Passed the House 35-20.

Passed the Senate 19-10.

Vetoed by the Governor, but then a modified version of this bill was passed and signed during the July special session.

24. Limits Portland Air Quality Programs

HB 2895 would have limited Department of Environmental Quality's (DEQ) ability to expand automobile inspection programs into new counties unless the county has an identified ozone air pollution problem. It would have effectively excluded Yamhill, Columbia and Marion Counties from these programs, even though those counties contain a large number of people who commute into the Portland metropolitan area in their vehicles.

Passed the House 32-27.

Passed the Senate 17-13.

Vetoed by the Governor.

25. Limits DEQ authority to protect Portland's air quality

HB 3448 would have limited the DEQ's ability to develop an air quality maintenance plan for the Portland metropolitan area by specifically prohibiting various programs such as expansion of vehicle inspection boundaries and parking ratios. In place of the prohibited programs, it would put even more emphasis on various strategies which have not been effective in the past.

Without proven, effective air quality strategies, the federal EPA will not approve a maintenance plan for Portland. Without an approved plan, Portland will continue to be legally in "non-attainment," which means that new and expanding industries in the region will have to continue purchasing expensive air pollution reduction equipment and offsets.

Passed the House 37-21.

Passed the Senate 16-13.

Vetoed by the Governor.

Recycling

26. Weaken Plastics Recycling Standards

There were numerous attempts to weaken Oregon's successful recycling programs during the session, mostly in the area of plastics recycling. Among the worst was SB 950, which would have exempted all plastic containers for products covered under the Federal Insecticide, Fungicide and Rodenticide Act (FIFRA). FIFRA is a very broadly written law, which covers not just pesticides but also many household cleaning products that come in easily recycled containers. This bill would have affected up to 15 percent of the plastics that are currently covered by Oregon Recycling Law.

Passed the Senate 20-9

Passed the House 32-26.

Vetoed by the Governor.

Endangered Species/Wildlife

27. Wildlife Ranching

The Oregon Department of Fish and Wildlife (ODFW) has authority over all non-livestock animals in the state. Some ranchers are currently raising cervids (members of the deer family) for hunting. ODFW recently issued rules regulating cervid ranching, limiting the species allowed, but allowing those ranchers already raising those species to continue.

HB 3025 would have eliminated the restrictions on some of the forbidden species, especially elk. Our concerns were based on evidence from other states that allow cervid ranching. Domestic cervids could easily spread

disease to native stocks. Exotic species could interbreed with native species, resulting in genetic problems. It would be impossible to differentiate between animals hunted legally and poached animals, thus encouraging a market for poached animals.

Failed in the House 22-37.

Did not come to a vote in the Senate.

28. Remove Protection for the Spotted Owl

HCR 4 was a resolution to Congress urging the removal of the northern spotted owl from the threatened species list. This was simply a political ploy to allow more logging in Oregon's ancient forests. There is no credible biological data to support a de-listing of the northern spotted owl under the federal ESA.

Passed in the House 43-16

Passed the Senate 20-10.

Resolutions do not go to the Governor.

29. Memorial to Weaken the Endangered Species Act

HJM 3 was a memorial to Congress to weaken the federal Endangered Species Act (ESA) by giving equal consideration to human and economic impacts in making further

additions to lists of threatened or endangered species. Human and economic impacts are already considered under the ESA. They are only omitted from the decision to list a species as threatened or endangered - the one aspect of the act based solely on biological evidence.

Passed the House 50-10

Passed the Senate 22-8.

Memorials do not go to the Governor.

30. Memorial to Weaken the Marine Mammal Protection Act

HJM 4 was a memorial to Congress to weaken the MMPA under the guise of saving salmon. It was supported by those who claim the main threat to salmon lies with marine mammals. It was opposed by environmentalists for several reasons. Congress has already amended the MMPA to allow removal of problem marine predators where they are having an adverse impact to native salmonid stocks. There is also no scientific evidence that shows salmon make up more than a small percentage of the marine mammal diet at any time of the year.

Passed the House 56-2.

Passed the Senate 24-4.

Memorials do not go to the Governor.

What you can do to improve these scores

Now that you "Know the Score", what should you do?

If your Representatives and Senators voted to protect Oregon's environment, send them a note of thanks. There was a great deal of pressure put on legislators to weaken our environmental laws, and the legislators that voted NO vote after vote deserve our thanks.

If your legislator voted with the timber, grazing, development, plastics, pesticide, and polluter interests and against environmental protection, then let them know that you live in

their district, and that you are unhappy with their performance in Salem.

Remember, a short, polite note is all that is needed to let them know that you "Know the Score".

How to reach your legislator

Oregon legislators are only in regular session for the first 6 months of every odd numbered year. We've listed their interim addresses below. If you're not sure which district you live in, give us a call at the office at 224-4011 or call your county elections office.

State Representatives

District	Representatives	Address	E-mail

**What can you do
to improve the scores
of our legislators
in the next session?**

**Oregon League of
Conservation Voters**

520 S.W. 6th Avenue, Suite 701

Portland, Oregon 97204

Telephone (503) 224-4011

FAX (503) 224-1548

Support the Oregon League of Conservation Voters today!

The Oregon League of Conservation Voters is the political arm of the environmental movement in Oregon. OLCV is supported by environmentally concerned Oregonians who believe in using the political process to protect Oregon's environment.

If you don't like what you see coming out of our Legislature, then it's time for you to do something about it. Support the Oregon League of Conservation Voters by becoming a member. Your membership underwrites our programs that educate voters and hold elected officials accountable.

YES! I want to do my part to help win the campaign victories we need to save our environment. That's why I am joining the Oregon League of Conservation Voters with a dues contribution of:

- | | |
|---|--|
| <input type="checkbox"/> \$35 Family Membership | <input type="checkbox"/> \$52 OLCV Sponsor |
| <input type="checkbox"/> \$100 OLCV Sustainer | <input type="checkbox"/> \$200 OLCV Friend |
| <input type="checkbox"/> \$20 Student/Senior membership | <input type="checkbox"/> \$500 Benefactor |
| <input type="checkbox"/> Other \$ _____ | |

NAME _____

ADDRESS _____

PHONE _____

- Please let me know about volunteer opportunities.

Since your contribution to OLCV will support our programs that educate voters, hold elected officials accountable, and encourage political action to protect our environment, it is not tax-deductible.

**Please make your check payable to OLCV and send to 520 SW Sixth,
Suite 701, Portland, OR 97204.**

Pollution

28. Remove Protection for the Spotted Owl

HCR 4 was a resolution to the removal of the northern spotted owl from the threatened species list. This was a political ploy to allow more logging in ancient forests. There is no scientific data to support a de-listing of the spotted owl under the federal Endangered Species Act.
